

Advance-Rag

Full-stack Intelligence Platform combining Document RAG, Neo4j Knowledge Graphs, and Fraud-Intelligence Workflows.

 [License](#)  [Python](#)  [NVIDIA NIM](#)  [Neo4j](#)

[Features](#) • [Architecture](#) • [Quick Start](#) • [Documentation](#)

Overview

Advance-Rag is not just another RAG application. It is a unified platform designed to solve complex intelligence problems by bridging the gap between **unstructured documents** and **structured registry data**.

[!IMPORTANT] The system enables teams to ask grounded research questions over PDFs while simultaneously detecting fraud patterns, ghosts, and anomalies in connected citizen records.

Key Features

Feature	Description	Tech
 Research Chat	Grounded Q&A with precise citations over uploaded document sets.	Qdrant, NVIDIA NIM
 Knowledge Map	Visual exploration of document entities and registry relationships.	Neo4j, React-Force-Graph
 Social Registry	Dashboard for fraud detection, audit prioritization, and risk clusters.	Postgres, FastAPI
 Eligibility Studio	Automated extraction of policy rules and citizen evaluation.	LLM, Document Parsing

Platform Preview

Architecture

The platform follows a modern microservices architecture powered by the NVIDIA AI stack.

Quick Start

- 1. Prerequisites
- 2. Environment Setup
- 3. Launching the App

Default Endpoints

- **Frontend:** <http://localhost:5177>
- **API Docs:** <http://localhost:8081/docs>
- **Neo4j Console:** <http://localhost:7474>

Project Structure

```
├── backend/           # FastAPI, UV, SQLAlchemy
├── frontend/          # React, Vite, shadcn/ui
└── docs/              # Technical deep-dives
```

└─ assets/	# Visual media and banners
└─ infra/	# Docker configurations

□ Documentation

Deep dive into the core mechanics:

- □ [Master Pipeline Flow](#)
- □ [Knowledge Graph Guide](#)
- □ [Fraud Intelligence Presentation](#)
- □ [Eligibility Layman Brief](#)
- □ [Database Curation](#)

Built for scale and intelligence. Optimized for NVIDIA NIM.
